

MW-156

The Mini-Wall not only allows a videowall to fit just about anywhere but has the videowall processor and media playback engine built into each unit. Currently up to 32 15.6" panels can be used together to create a variety of patterns that is sure to attract customers to view the content. The media engine can playback high definition content and has enough memory for hours of content. The Mini-Wall is the latest addition to the existing DIDO real-time rotation videowall processors.

Video
