

NX-DAP

The NX-DAP is a Digital Audio Player that connects directly to the Fast 32 bit wide WACI NX-PANSION™ bus. The NX-DAP adds an audio resource directly to the WACI NX control system that is ideal for kiosk environments where events and actions cause audio clips to be played back. This connection to the WACI NX allows the built in event manager to control the audio player with minimal setup, and powerful WACI responsiveness makes the user experience extremely smooth.

Specifications

Hardware

Analog audio outputs: left/right
SPDiF digital audio output
Event manager controlled
