

WACI POD

WACI-POD is a key element in creating the most cost effective controlled environments possible. Using the WACI-POD, multiple controlled rooms can be managed under the umbrella of a single WACI NX. Using our free WACI Distributed software application, centralized asset management and control can be established over the facility network. The inexpensive WACI-POD not only provides extension ports for WACI NX Controllers, but it also has the ability to operate as a stand-alone controller. Just as WACI NX understands commands sent from customized web pages, so does the WACI-POD.

Specifications	
Hardware	Two Serial Ports Two IR Ports Two Relays Two I/O 250 Mps operation 32 Bit processor Setup and diagnostics are built into the web server
